Subject: Application for Internship – Human Motion Understanding and Generation through Multilingual Text Descriptions

Dear Members of the Hiring Committee,

I am writing to formally apply for the 6-month research internship regarding "Human Motion Understanding and Generation through Multilingual Text Descriptions" at Mohammed VI Polytechnic University (UM6P). As a final-year Master's student in Intelligent Systems Engineering at FSAC and a student who has completed the curriculum at 1337 (42 Network), I am deeply invested in the intersection of Generative AI, Large Language Models (LLMs), and representation learning.

Your project's focus on moving beyond English-centric datasets to leverage multilingual text descriptions is particularly compelling. It addresses a critical gap in current computer vision and NLP research—the fact that different languages encode semantic structure differently, which can offer unique "views" for robust motion generation.

My technical background aligns well with the requirements of this project:

- **AI LLM Proficiency:** Through my Master's studies and personal projects, I have gained experience working with LLMs and AI agents. I understand the nuances of prompting and conditioning models, which is essential for leveraging LLMs to diversify motion descriptions as described in your proposal.
- **Engineering Coding Standards:** My training at 1337 (42 Network) has instilled in me a rigorous approach to software architecture and Python development. I am comfortable managing complex pipelines and implementing research papers into functional code.
- **Research Alignment:** My academic path in Intelligent Systems has prepared me to tackle complex problems in representation learning. I am eager to apply my knowledge of backend technologies and AI to improve existing motion generation pipelines.

Being currently based in Benguerir, I have witnessed UM6P's commitment to positioning Africa at the forefront of research and innovation. I am eager to contribute to this mission by bringing my technical skills and research curiosity to this project.

Thank you for considering my application. I would welcome the opportunity to discuss how my background in Intelligent Systems and software engineering can contribute to the success of this project.

Sincerely,

Yassin Aboulanouar
